

PALLAVI BOMEWAR

DevOps Engineer

+91 7770011274 | pallavibomewar@gmail.com | LinkedIn | GitHub | Pune, MH

PROFESSIONAL SUMMARY

DevOps Engineer with 9+ months of hands-on experience automating CI/CD pipelines, managing AWS cloud infrastructure, and deploying containerized microservices at scale. Proficient in Docker, Kubernetes, Jenkins, Terraform, Ansible, and full-stack observability (CloudWatch, Datadog, Prometheus, Grafana). Experienced in DevSecOps (SonarQube SAST), GitOps, IaC, incident response, RCA, and disaster recovery. Reduced deployment time by 40%, automated 15+ manual tasks saving 10+ hrs/week, and achieved 99.9% uptime — enabling faster, more reliable releases across Agile cross-functional teams.

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, S3, VPC, IAM, RDS, Route 53, CloudFront, CloudWatch, Auto Scaling, EBS, Lambda, EKS) · Terraform · CloudFormation · Ansible

CI/CD & DevOps: Jenkins · Argo CD · GitHub Actions · GitOps · GitFlow · GitHub Webhooks

Containers & Orchestration: Docker · Kubernetes (K8s) · Helm · Microservices · Container Registry

Monitoring & Security: CloudWatch · Datadog APM · Prometheus · Grafana · SonarQube (SAST) · IAM Least-Privilege · SSL/TLS · Vulnerability Scanning

Scripting & Tools: Bash · Shell Scripting · Git · GitHub · Nginx · Apache · MySQL · Linux (Ubuntu) · Agile · Documentation

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern | Hisan Labs Pvt. Ltd., Pune | Jul 2024 – Present

- Designed and implemented Jenkins CI/CD pipelines integrating GitHub Webhooks, Docker, and SonarQube (SAST) — reduced deployment time by 40%, cut release cycle from 2 hrs to 20 mins, and eliminated 8 manual steps across 3 environments (Dev, Staging, Production).
- Provisioned scalable, high-availability AWS infrastructure (EC2, S3, IAM, VPC, RDS, Auto Scaling) using Terraform IaC modules — reduced environment setup time by 60%, eliminated configuration drift, and managed 5+ cloud environments consistently.
- Enforced DevSecOps compliance: configured IAM least-privilege roles, S3 versioning/encryption/lifecycle policies, and SonarQube pipeline gates — blocked 100% of critical security vulnerabilities and 20+ code issues before every production release.
- Built CloudWatch and Datadog observability dashboards with 10+ custom metrics and alert rules — reduced Mean Time to Detect (MTTD) by 50% and Mean Time to Resolve (MTTR) by 35%, achieving 99.9% production uptime.
- Automated 15+ repetitive operational tasks (log rotation, health checks, backups, deployments) using Bash/Shell scripts — saved 10+ engineering hours per week, reduced human error by 80%, and improved team efficiency.
- Executed AWS disaster recovery (DR) procedures with documented runbooks — ensured RPO < 1 hr and RTO < 2 hrs, maintaining 99.9% data durability and business continuity across all environments.
- Collaborated with cross-functional Agile team of 8 engineers using GitFlow branching, pull requests, and code reviews — maintained zero broken main-branch deployments over 6+ months of continuous delivery.

PROJECTS

1. Microservices Web App Deployment | Docker · Kubernetes · Helm · AWS EKS · Jenkins · Argo CD · Spring Boot · Angular · Datadog · SonarQube

- Containerized 10+ Angular + Spring Boot microservices with Docker; orchestrated on Kubernetes (K8s) with Helm — achieved auto-scaling, self-healing pods, and zero-downtime rolling deployments with 99.9% availability.
- Built multi-stage Jenkins CI/CD pipeline (checkout → SAST → Docker build → K8s deploy) with automated rollback — reduced release cycle from 2 hours to 20 minutes across 3 environments.
- Integrated Datadog APM + distributed tracing + Prometheus/Grafana for full-stack observability across 10+ microservices — configured 15+ custom dashboards and anomaly detection alerts, cutting incident detection time by 50%.

2. Automated Web App Deployment via CI/CD & Docker | Jenkins · Docker · Nginx · SonarQube · GitHub Actions · GitHub Webhooks · AWS EC2 · Bash

- Automated full deployment workflow (Jenkins + GitHub Webhooks + GitHub Actions) — achieved 100% zero-touch deployments from commit to production, eliminating 8 manual steps and reducing deployment errors to zero.
- Containerized app with Docker/Nginx reverse proxy; enforced SonarQube SAST pipeline gate — detected and blocked 20+ critical vulnerabilities across 3 release cycles before production release.

EDUCATION & CERTIFICATIONS

B.Tech (Computer Science) — Rashtrasant Tukadoji Maharaj Nagpur University | Dec 2021 – Jun 2024

Coursework: Cloud Computing · Operating Systems · Computer Networks · Linux Administration · DBMS · Software Engineering

AWS DevOps Certification — CloudBlitz Technologies, Pune | Completed: Jun 2024 | Cert ID: CBD-AWSDVPS-2024

Topics: CI/CD · Docker · Kubernetes · Terraform · AWS Services · Jenkins · Monitoring · DevSecOps · IaC · GitOps

KEY ACHIEVEMENTS & IMPACT

- Reduced deployment time by 40% and release cycle from 2 hrs to 20 mins via Jenkins CI/CD pipeline automation.
- Cut AWS environment setup time by 60% using reusable Terraform IaC modules — eliminated configuration drift across 5+ environments.
- Blocked 100% of critical security issues and 20+ vulnerabilities by integrating SonarQube SAST as a mandatory pipeline gate.
- Improved MTTD by 50% and MTTR by 35% through real-time Datadog + CloudWatch observability dashboards — achieved 99.9% uptime.
- Saved 10+ engineering hours/week by automating 15+ operational tasks using Bash scripting — reduced human error by 80%.
